

To print (and preserve) these setup instructions; choose Print from the File menu. Press Enter to print the guide.

HOW TO SETUP THE DEMO

Using this guide, you can setup a professional handPoint Retail demonstration in just under an hour.

- 1 . RAR is required** to extract the supplied virtual image.
- 2 . Virtual PC 2007 is required** to play the supplied virtual machine.
- 3 . ActiveSync is required** to push content onto the handheld device(s).
- 4 . handPoint Retail is required** to actualize the demonstration on each handheld device.

WHAT ELSE SHOULD I KNOW?

The WinRar archiver is available from Rarlabs at <http://www.rarlab.com/>.

Virtual PC is available from Microsoft at <http://www.microsoft.com/windows/products/winfamily/virtualpc>.

ActiveSync is available from Microsoft at <http://www.microsoft.com/windowsmobile/activesync/>

Latest version of handPoint Retail is available from <http://www.handpoint.com/>

HANDPOINT VIRTUAL QUICK START GUIDE

Retail Solutions in a Global Market

HOW TO SETUP HANDPOINT VIRTUAL

ACTIVESYNC

Microsoft ActiveSync, should be the first thing installed (handPoint Retail will not work correctly with out it).

HANDPOINT RETAIL

handPoint Retail, should only be installed after Microsoft ActiveSync.

Default installation options are ok.

After the installation wizard completes you should cancel any attempts at automatic installation of devices through ActiveSync.

WINRAR

WinRar, you should open and extract the virtual image into c:\handPoint\virtual (6-10 minutes depending on system speed).

VIRTUAL PC 2007

Virtual PC 2007 (or later) from Microsoft comes in two versions, one for 32-bit machines and one for 64-bit machines.

Download is 30 MB and takes 2-10 min depending on the network connection, be sure to pick the one that matches your system type.

After installing Virtual PC onto the demo machine launch it from Start → Programs → Microsoft Virtual PC.

1 . On first time launch a Wizard pops up where you should hit Next until you can select “Name and location”, there you should type in “handPoint Virtual”.

2 . Hit Next until you can select “Windows XP” as the operating system.

3 . Hit Next until you can select the location of the virtual hard disk and browse to the location where you extracted the virtual image (e.g. c:\handPoint\virtual).

4 . Hit Next until you arrive at the Completion screen and then hit Finish.

HANDPOINT VIRTUAL

From the Virtual PC Console select the “handPoint Virtual” machine and hit Start.

After the virtual machine has started you will need to select the “User” account before the system is ready for use.

NETWORKING

The virtual machine will automatically acquire a network address if the demo machine is connected to a network with a DHCP server (e.g. a router that has DHCP server turned on).

The virtual machine is DHCP enabled by default.

If not connected to a DHCP enabled network, then you can specify an IP address through Start → Control Panel → Network Connections (Right click, select properties then select Internet Protocol, select properties again and insert your manual config).

To get the IP address of the virtual machine simply hit Start → Run (from within the virtual session), type cmd, hit enter. Then type ipconfig and hit enter.

Use ipconfig to find out the IP address of the virtual machine.

SHARING DATA

At this point you should share the following folder on the virtual machine:

C:\Program Files\handPoint\Retail
5\bin\Simulator

This you do through Start → “My Computer” by browsing to the Simulator folder. Where you right click on it and select “Sharing and Security”.

In the Sharing tab please check “Share this folder on the network” and hit OK.

From Start → Run, on your demo machine, you can now type, for example, “\\10.10.1.122\Simulator” to access the data that needs to go onto the devices.

PREPARING A HANDHELD DEVICE

HANDPOINT RETAIL

handPoint Retail, should be installed onto a device from one of the shortcuts under Start → Programs → handPoint → Retail 5.

Before selecting a shortcut please examine the handheld device that you have.

Note down any manufacturer markings: e.g. Symbol, XPDA-S, etc.

Note down the handheld system type, from Start → Settings → Control Panel → System or Start → Settings → System → About

Note down if the handheld has a build-in scanner or not.

Use the noted down information to select the correct shortcut. Note that Windows Mobile handhelds should use a Pocket PC install.

HANDHELD DEVICE

Handheld device, select the appropriate shortcut for installation and then place the handheld into the cradle.

During installation make sure that any dialogs that appear on the handheld are dealt with.

After installation you should hit cancel if asked to register this device with handPoint Desktop Server Options.

HANDHELD NETWORKING

Handheld Networking, if you have a device with a wifi card then you may want to, at this point, take the time to setup wireless networking on the handheld device.

HANDPOINT VIRTUAL

handPoint Virtual, has four different demonstrations available that can all be executed on the virtual host.

If you at any time want to copy the specific Retail simulation onto a device then please follow these steps:

- 1 . Start the specific Retail Simulation** through the shortcut on the Desktop (in the virtual machine).
- 2 . Exit the Simulation.**
- 3 . Open the share on the virtual machine,** from the demo machine (e.g. “\\10.10.1.122\Simulator”).
- 4 . Right click on ActiveSync**, in the lower right corner of the screen and select Explore.
- 5 . Browse to Data folder on the device,** located under \Program Files\handPoint\Retail 5.
- 6 . Copy everything from the share,** to the data folder.

7 . Run handPoint Retail, on the device.
